

## *How to Make a Drawbridge*

*Have you ever wanted to make your own moving drawbridge? If so, read these instructions and you will have a moving drawbridge for your castle.*

*What you need:*

- *A small box*
- *Paper*
- *String*
- *Scissors*
- *Hole punch*
- *Glue*
- *Pencils*

*What you do.*

1. *First cut down 2 sides of the box so that you can make your drawbridge.*
2. *Next, glue paper to the front of the drawbridge, cut out the battlements and use a pencil to make it look like wood.*
3. *After that, using the hole punch, put 2 holes in the back of the box at the top and 2 more holes on the front of the drawbridge at the top.*
4. *Then, cut a length of string long enough to go through all four holes so that your drawbridge will be able to go up and down.*
5. *Next, tie the string to the two front holes of the drawbridge. Make sure that they are tight enough.*
6. *Finally, pull the string from the back of the box and your drawbridge will rise up. To make the drawbridge go down, slowly let the string go.*
